Critter Ridder® Animal Repellent Granules

Application & Treatment Guide

What It Repels

Critter Ridder® repels:

- Raccoons
- Squirrels
- Skunks
- Groundhogs
- Dogs
- Cats

It works through **odor and taste**, making the treated area unpleasant to nuisance animals.

Where to Apply

Outdoors

Apply the granules to:

- Lawns
- Non-edible flowerbeds
- Garden paths
- Ground surrounding garbage cans
- Ground around ornamental plants, trees, and shrubs
- Animal travel routes and entry points

For a specific area, apply the granules to the ground as a **continuous protective border** around the entire area.

Indoors

Use only in **non-living areas**, including:

- Attics
- Basements and cellars
- Garages
- Storage areas
- Sheds
- Barns

How Much to Apply

Outdoor Rate

Apply **16 ounces per 40 square feet**.

Lightly and evenly sprinkle the granules directly from the container or apply them with a spreader.

Indoor Rate

Apply **4 ounces per 15 square feet**.

Wear gloves and lightly sprinkle the granules throughout the area that needs protection.

How to Apply

1. Choose a **sunny, dry day** for outdoor application.
2. Put on protective gloves.
3. Identify where the animals are entering, traveling, digging, feeding, or disturbing the property.
4. Lightly and evenly apply the granules at the correct rate.
5. When protecting a specific object or area, create a complete border on the ground around it.
6. Leave the granules in place so the animals encounter the repellent through its odor and taste.

Check

Inspect the treated area regularly for:

- New tracks
- Digging
- Disturbed garbage
- Droppings
- Continued animal activity
- New entry routes around the treated border

If the animal changes its travel route, extend the treated border to cover the new route.

Reapply

One application can repel animals for **up to 30 days**.

Reapply **after 30 days if animal activity continues**.

Critical Rules

- Apply outdoors only on a **sunny, dry day**.
- Always wear gloves when handling the granules.
- Do not apply directly to shrub foliage.
- Do not apply directly to soft-bodied ornamental plants.
- Do not apply to food crops or animal-feed crops.
- Do not apply directly to water, standing surface water, ponds, lakes, or streams.
- Avoid contact with eyes, skin, and clothing.
- Keep the product in its original container.

- Store tightly closed in a cool, dry location inaccessible to children and pets.
- Always follow the product label.

What to Expect

Critter Ridder® does not trap or kill the animal. It makes the treated area unpleasant through odor and taste, encouraging the animal to leave and avoid returning.

Results depend on applying the correct amount and completely covering the animal's travel route or the perimeter of the area being protected. A broken border can become an open door—wildlife is annoyingly good at finding loopholes.

Warranty & Conditions of Sale

DIY Pest & Lawn provides no warranty, expressed or implied, beyond the manufacturer's product label. The product must be stored, handled, and applied according to label directions. The buyer or applicator assumes responsibility for any use inconsistent with the label.
