

Kill it, Green it, DIY it.

Weed Prevention Plan – 0-0-8 with 0.43% Barricade

THE PROBLEM

You're trying to stop weeds **before they ever come up**.

That means this is not a weed killer for stuff that's already growing.

This is a **pre-emergent barrier** that goes down first, then stops weed seeds from sprouting.

WHAT THIS PRODUCT DOES

0-0-8 with 0.43% Barricade is labeled for pre-emergent control of grassy and broadleaf weeds in:

- Established turfgrass / lawns
- Flower beds and landscape beds
- Around ornamentals
- Established perennials and wildflower plantings
- Other non-crop landscaped areas

That means yes — you can use it in the **yard**, **around shrubs**, **flower beds**, and **other landscaped areas** where you want to stop weed pressure before it starts.

THE PLAN

We're putting down a **pre-emergent layer** over the property before weeds germinate.

This helps prevent common problem weeds like:

- crabgrass
 - goosegrass
 - foxtail
 - henbit
 - knotweed
 - prostrate spurge
 - Florida pusley
 - woodsorrel and more.
-

HOW TO APPLY

Step 1 – Apply to the Lawn / Yard

For established turf, the label gives these use rates:

- **Base rate: 2.0 lbs per 1,000 sq ft**
- **Medium rate: 2.7 lbs per 1,000 sq ft**
- **High rate: 4.0 lbs per 1,000 sq ft**

Use the **base rate** for normal prevention.

Use the **medium or high rate** if weed pressure has been bad in the past.

Where to apply in the yard:

- Front yard
- Back yard
- Side yard
- Along edges of turf
- Around open lawn areas where weeds usually show up

Important:

- Apply in **early spring before weed emergence**
 - This product **will not control weeds that are already up**
 - On turf, **do not exceed 8 lbs per 1,000 sq ft per calendar year**
 - **Do not make more than 2 applications per year**
-

Step 2 – Apply to Flower Beds and Landscape Beds

The label also allows this product in:

- **landscape beds**
- **ornamental areas**
- **established perennial plantings**
- **wildflower plantings**
- **non-crop landscaped areas**

For ornamentals and beds, apply as a **broadcast, over-the-top application** at:

- **3.5 to 8.0 lbs per 1,000 sq ft**

Good places to apply:

- Flower beds 
- Mulch beds 
- Around shrubs

- Around trees
- Around established ornamentals
- Decorative planting areas
- Other landscaped islands or borders

Use the **lower end** when pressure is lighter.

Use the **higher end** when weeds have been a heavy problem before.

Step 3 – Water It In

This part matters.

After application:

- Water in with **½ inch of water within 14 days**
- Rain can do it
- Irrigation can do it
- In ornament beds, it can also be **incorporated into the top 1–2 inches of soil within 14 days**

No activation = weak barrier.

So don't skip this step.

IMPORTANT RULES

- **Do not use it on weeds that are already growing** — it's for prevention only.
 - For best results, apply to soil that is **free of clods, weeds, and debris like leaves**.
 - In beds, **control existing weeds first** by hand pulling, cultivation, or a labeled post-emergent herbicide before applying this product.
 - On newly transplanted ornamentals, **apply after the soil has settled around the transplants**.
 - Plants under stress from **heat, drought, or frost** may be more sensitive.
-

WHY THIS MATTERS

This is how you keep the property cleaner with less headache later.

Instead of chasing weeds after they show up, you block them at the front gate.

That means:

- less breakthrough in the yard
 - cleaner flower beds
 - less competition around ornamentals
 - less time spraying post-emergents later
-

FINAL RESULT

- ✓ Protects the lawn before weeds emerge
 - ✓ Helps keep flower beds and landscape beds cleaner
 - ✓ Can be applied around established ornamentals and perennial areas
 - ✓ Builds a weed barrier across the property when watered in properly
-
