

The DIY Total Flea Elimination Plan

Kill the Fleas. Break the Cycle. Protect Your Home for Years.

This isn't just a flea kit. It is a professional-grade system designed to eliminate active flea infestations and then transition into a long-term general pest control plan that helps protect your home for up to 3 years.

Phase 1: The Clean-Out (Stop the Itch)

Follow this schedule exactly. Missing a step can allow newly hatched fleas to survive.

♦ Step 1: Immediate Indoor Knockdown (Pivot Ultra Plus)

Use this inside while your liquid mix is working outside.

How: Hold can 36" away and spray carpets, rugs, furniture, and pet bedding in a slow sweeping motion.

Safety: Cover fish tanks. Remove birds. No people or pets in the room until dry (approx. 2 hours).

Pro Tip: Vacuum **BEFORE** treating to vibrate eggs and force them to hatch into the treatment. Vacuum daily for 2 weeks.

♦ **Step 2: The Liquid Barrier (Bifen I/T + Precor IGR)**

This is the heavy artillery.

Day 1: The "Nuke" Treatment

The Mix: 2 oz **Bifen I/T** + 1 oz **Precor IGR** + 1 Gallon Water.

Where to Spray:

OUTSIDE (Critical): Fleas come from the yard. Spray shaded areas, under decks, dog runs, mulch beds, and anywhere the pet sleeps. Soak the soil to target larvae.

INSIDE: Spray all baseboards, under appliances, closets, and entryways.

Day 7 & Day 14: The Follow-Up

The Mix: 1 oz **Bifen I/T** per Gallon Water (No IGR needed).

The Goal: Eliminate newly hatched fleas before they can reproduce.

Where: Re-spray the exterior perimeter and indoor baseboards.

♦ **Step 3: Treat the Host (Petcor 2)**

The Rule: You can't fix the house if the dog is a flea taxi.

Action: Spray Petcor 2 directly on the animal (safe for dogs, cats, puppies, and kittens). It kills adult fleas and stops egg development on the pet.

Phase 2: Long-Term Protection (The “Free” Bonus)

Once flea activity is under control. **Now look at your bottle of Bifen I/T.** You should have about **12 oz left.** Do not throw it away.

You now own a professional **General Pest Control Plan** for the next **2–3 years.**(every 2–3 months, depending on your routine)

Duration is based on typical application rates of 1 gallon per 1,000 sq ft. Larger homes or heavier applications may reduce total coverage time.

The “Total Home Defense” Routine

(Starts 30 days after Day 14)

The Mix: 1 oz **Bifen I/T** per gallon of water.

The Target: This mix controls a wide range of common household pests including roaches, ants, spiders, ticks, mosquitoes, silverfish, earwigs, and more (as listed on the label).

Your Maintenance Options (Choose One):

The “Perimeter Shield” (Recommended):

Spray 3 ft up the exterior wall and 3 ft out on the ground every **3 months.**

The “Total Defense” (Inside & Out):

If bugs are present indoors, spray the exterior perimeter **and** indoor baseboards every **2 months.**

Summary: You paid for a flea kit — and eliminated the need for monthly pest control services for years.
